Education

•Bachelor of Technology in Computer Science and Engineering *2024–2028*

Kalyani Government Engineering College (KGEC), affiliated to MAKAUT CGPA: 8.23 (ongoing)

Personal Projects

• GemReview *gemreview*

AI-powered GitHub PR review CLI built on Google Gemini, published as an npm package.

- Built as a monorepo: CLI, GitHub Action, Hono backend, and a planned Next.js dashboard.
- Implemented Gemini API rate-limit (429) handling with retry/backoff for reliable automated reviews in CI pipelines.
- Technology Used: TypeScript, Node.js, Hono, Google Gemini API, GitHub Actions.

• Journey to Mastery (J2M) *J2M*

A gamified developer growth platform with tiered progression: Ronin → Kenshi → Samurai → Shogun.

- Built full-stack with Next.js 14, Supabase (PostgreSQL), Drizzle ORM, GitHub OAuth, and Gmail API for automated certificate delivery via pdf-lib.
- Implemented challenge submission, review workflow, and leaderboard system for the KGEC developer community.
- Technology Used: Next.js 14, Supabase, Drizzle ORM, GitHub OAuth, Gmail API, Vercel.

• ShadowVote (Private Election System) *shadowVote*

A privacy-preserving on-chain voting system using ZK proofs on the Midnight Network.

- Built using Midnight's Compact smart contracts and shielded state architecture to ensure votes are verifiable without revealing voter identity.
- Technology Used: Compact (Midnight), ZK Proofs, TypeScript, Midnight Network.

Experience

•Core Member / Intern Lead *2025 – Present*

Developer Community, KGEC Kalyani, West Bengal

- Led intern hiring for the campus developer community: designed the screening process, reviewed applications, and conducted technical interviews to select new members.
- Designed and shipped **Journey to Mastery** (journey-2-mastery.vercel.app) — a live, full-stack tiered builder challenge platform used by the KGEC dev community.
- Currently building **KWoC** (KGEC Winter of Code) — a cohort-based open-source contribution platform with microservices architecture deployed on Vercel.
- Currently rebuilding the **KGEC official website** (kgec.edu.in) on a modern stack: Next.js App Router, Supabase, Drizzle ORM, and NextAuth.js v5.
- Mentored peers on full-stack development, Web3 integrations, and AI-assisted tooling.

Technical Skills and Interests

Languages: TypeScript, JavaScript, C/C++, Python, Rust
Frameworks: Next.js, React, Hono, Tailwind CSS, shadcn/ui
Backend & Tools: Node.js, Socket.io, Drizzle ORM, NextAuth.js, pdf-lib, Git, GitHub Actions
Databases: Supabase (PostgreSQL), MongoDB, Redis, Vector Databases
AI / ML: RAG pipelines, LLM integration (Gemini, Claude), agent memory systems
Web3 / Blockchain: Stellar (Soroban), Avalanche (Fuji), Midnight (Compact/ZK)
Relevant Coursework: Data Structures & Algorithms, OOP, Automata Theory, DBMS.
Areas of Interest: Full-Stack Development, Web3/Blockchain, AI Agent Systems.
Soft Skills: Problem Solving, Self-learning, Presentation, Adaptability

Positions of Responsibility

•Builder, Stellar Journey to Mastery Program *2025 – Present*

- Active builder in Stellar's developer program, shipping Soroban-based products targeting Stellar Community Fund (SCF) grants.
- Authored a full PRD for a Stellar-native stablecoin checkout layer enabling merchant settlement via Stellar's anchor network.
